Teaching Evaluations

Hyunjae "Jay" Kang

Stony Brook University

kang.hyun-jae@stonybrook.edu

This page is a summary of my teaching evaluations at Stony Brook University. The complete set of teaching evaluations is available upon request. The score is on a five-point scale.

As an Instructor:

Econometrics (Spring 2019: 4.52, Summer 2020: 4.50, Spring 2020: 4.60, Summer 2020: 3.83)

Excerpts from the comments section:

- "In comparison to my experience in ECO321 with a different professor, I'd say Jay does a very good job at teaching. I, more or less, understood why it is we were doing what we were doing (with the exception of some R related things toward the end of the course). I wouldn't say that this class is a cake walk, but I would say that if you always ask questions when you need clarification (whether it be in-class discussion,, emails, or office hours) things may be smoother. Jay is a funny and knowledgeable guy who tries to do what's fair and isn't trying to submerge you in meaningless subtopics which I really appreciate."

- "Really econometrics in general. He's very clear about what he tries to express. Probably the most patient person I've ever met. Don't hesitate to ask questions. Learn a great deal from office hours!!!"

- "The R based material and assignments were interesting and valuable."

- Jay teaches the course very well online and in person. He walks us through the topics and is always willing to clarify any topics. I learned a lot through the course and highly recommend him as a professor.

- Jay was very flexible and very kind. His lectures were easy to understand and follow through

As a Teaching Assistant:

Mathematical Statistics (First semester graduate Econometrics) (Fall 2017: 5.00)

Econometrics (Spring 2018 3.91)

Introduction to Economics (Fall 2016: 4.52, Spring 2017: 4.06)

Excerpts from the comments section:

- "Jay so so attentive and helpful. I can say enough great things about our TA. He is extremely nice and really make effort to make sure we are doing well in this class. Great TA!"

- "Jay was really good at helping us with the homework assignments! He taught us some basic R skills and reviewed the course material before exams. He put a lot of effort into helping us get the best grades we could. He even uploaded his own notes on some of the material that people had trouble with."
